

# Kenan Ibragimov

Senior Unity Developer | Gameplay Architecture | Performance | AI Integration | Build Automation

Email: shoxssisa@gmail.com | Telegram: @kenanIbragimov | Location: Baku, Azerbaijan

## Profile

Senior Unity Developer with 5+ years of commercial production experience across AA, midcore, casual and mobile RPG projects. Focused on production-critical Unity systems: gameplay architecture, UI frameworks, optimization, SDK integrations, build pipelines and AI-assisted internal tools.

## Selected results

|                          |                                                                                          |
|--------------------------|------------------------------------------------------------------------------------------|
| <b>30s -&gt; 18s</b>     | Reduced hub loading time by reworking Addressables groups and loading order.             |
| <b>47s -&gt; 23s</b>     | Reduced mission loading time by splitting heavy content into cleaner loading stages.     |
| <b>-7.5 GB RAM</b>       | Removed shader/rendering and lifecycle-related memory pressure through profiling.        |
| <b>2 FPS drops</b>       | Fixed root causes behind drops from 100-120 FPS to 15-20 FPS.                            |
| <b>23 GB -&gt; 12 GB</b> | Reduced build size by about 48% through Addressables cleanup and asset audit.            |
| <b>CI/CD</b>             | Automated build delivery through TeamCity, Cloudflare R2, n8n and Discord notifications. |

## Experience

### Senior Unity Developer / Build Automation, Rhinotales - Critical Shift, Feb 2025 - Present

- Owned production-critical Unity areas across gameplay, UI/meta systems, performance, rendering features and build delivery.
- Stabilized legacy UI and feature architecture by reducing lifecycle risks, hidden dependencies and maintenance cost.
- Built CI/CD delivery around TeamCity, Cloudflare R2, QA distribution and Discord notifications.
- Introduced n8n and AI-assisted workflows for build distribution, code review support and project-documentation access.

### Unity Developer, GameFlinker / FlinkStudio, Jan 2021 - Feb 2025

- Delivered gameplay architecture, MVP-based UI and client-server features for mobile production projects.
- Implemented chat, friends, groups, cloud saves, leaderboards and quest systems through REST API and SignalR.
- Integrated production SDKs including Firebase, Adjust, Facebook SDK, Unity Analytics, IAP and Localization.

## Core technical areas

Unity, C#, .NET, ECS, Entitas, LeoECS, MVP, MVVM, Zenject, VContainer, uGUI, UI Toolkit, Addressables, Asset Bundles, URP, Unity Profiler, Memory Profiler, Frame Debugger, REST API, SignalR, Firebase, Adjust, Facebook SDK, Unity Analytics, IAP, Localization, TeamCity, Cloudflare R2, n8n, AltTester, AI-assisted code review.

## Projects

Critical Shift - AA tactical RPG for PC, PlayStation and Xbox. Stack: Unity, C#, URP, Addressables, TeamCity, Cloudflare R2.

Forge of Heroes - midcore turn-based mobile RPG. Stack: Unity, ECS, SignalR, REST API, Firebase.

Mahjong Solitaire Classic - mobile puzzle production. Stack: Unity, uGUI, IAP, Localization, Analytics.

BusyBrain - mobile casual project with production gameplay and UI flows. Stack: Unity, C#, uGUI, SDKs.

Store Mania - mobile simulator project with gameplay loops and platform integrations. Stack: Unity, C#, UI, Analytics.
