KENAN IBRAGIMOV

UNITY DEVELOPER

SUMMARY

Unity developer with **5+ years** of experience across teams from small prototype squads to **35-person AA productions**. Shipped casual, hybrid-casual, and AA turn-based RPG titles on mobile, PC, and consoles. Focused on **performance optimization** (**CPU/GPU/RAM**), **legacy code refactoring**, and building **internal tools** that accelerate the whole team. Extensive experience integrating **AI tooling** into day-to-day development and **CI/CD** pipelines

TECHNICAL SKILLS

- **ECS**(Leo, **Entitas**), OOP, SOLID,GRASP,CLEAN CODE
- DI(**Zenject**, **VContainer**), **UniTask**, **UniRx**, **Async Programming**, **Multi-platform Development** (iOS, Android, WebGL, PC, PS, Xbox)
- **Unity** Engine, **C#**, **URP**
- Spine, **Animancer**, **Addressables**, **DoTween**
- **REST API**, **SignalR**
- Git, **Odin Inspector**, **SRDebugger**, **CI/CD** (**TeamCity**, **GitLab**, **GitHub**)
- CPU, GPU, RAM Optimization, **Unity Profiler**
- **Firebase**, Adjust, Facebook, **Unity** Analytics, **Unity Remote Config**, **Unity Localization**
- **Unity** UI (uGUI, UI Toolkit, IMGUI)

PROFESSIONAL EXPERIENCE

Rhinotales — Feb 2025 - Present

https://critical-shift.com/ - hardcore turn-based RPG on PC, PS, XBOX

- Reduced scene load times on a shipping AA title: **Hub 37s -> 18s**, **Mission 50s -> 22s** via **Addressables** and lazy loading.
- Eliminated memory leaks and optimized shaders, cutting RAM usage by **~7.5 GB**.
- **Doubled FPS** through GPU optimization: **35 -> 65-70 FPS** in affected scenes; optimized shaders, decals and smoke.
- Built an in-house tool that tracks **ECS** entities and UI lifecycle across scene transitions, exposing leaks that were invisible in the Profiler.
- Refactored legacy UI code by introducing proper lifecycle management, removing long-standing leaks.
- Delivered a suite of editor tools for game designers: save inspection, content editing, and UI management windows.
- Automated the **CI/CD** pipeline across **ClickUp**, Git, and Discord using **Claude Code** and **n8n** - auto-granting access, updating test branches, and notifying on rejects/conflicts. Materially cut turnaround time for testers and developers.
- Implemented gameplay, UI, and meta systems on **ECS** (**Entitas**) + **Zenject**.

Stack: **Unity**, **C#**, **Zenject**, **Entitas**, **Addressables**, **DOTween**, **Odin Inspector**, Wwise, **Unit Testing**, **Claude Code**, Cursor, **Codex CLI**

GameFlinker — Jan 2021 - Feb 2025

Client-server midcore turn-based RPG project on **ECS**: **https://play.google.com/store/apps/details?id=fighting.rpg.adventure**
Mahjong Solitaire Classic (a matching game based on the famous classic Chinese game): **https://drive.google.com/drive/folders/1E3uEmsLNGYkOBP69HAMItjyiyvXR3fhG?usp=sharing**)
BusyBrain (A simple puzzle game): **https://drive.google.com/drive/folders/1yE6p0bcoGjM2GxkCJEAR2snwESCdE3kS?usp=sharing**)
StoreMania (Store Management Game): **https://drive.google.com/drive/folders/1dI1AztIPANE-xAH-J-a2ftM_lnph-oVS?usp=sharing**)

- Shipped core gameplay, **MVP**-based UI, and client-server modules (chat, groups, friends, cloud saves, leaderboards, quests) using REST and **SignalR**.
- Reduced build size from **700 MB to 190 MB** through **Addressables** (remote) and asset auditing.
- Improved runtime performance: **RAM -20%, CPU -10%, GPU -35%**.
- Cut scene load times from **30s to 12s** via async loading.
- Designed the app architecture around a generic async **StateMachine**, enabling flexible expansion of infrastructure and UI.
- Integrated analytics (**Firebase**, Adjust), IAP, and **Unity Localization** end-to-end.
- Built editor extensions and config windows that simplified daily work for programmers and game designers.
- Wrote unit tests covering core gameplay and infrastructure modules.

Stack: **Unity**, **C#**, **Zenject**, **UniRx**, **UniTask**, **DOTween**, **Entitas**, **Addressables**, **Firebase**, Adjust, **Unity Remote Config**, Spine, **SRDebugger**
